Fasteners

About R-Panel

R-Panel's taller rib and wider spacing make it a go-to for commercial and structural builds. The 2:12 minimum slope opens it up to lower-pitch roofs where other exposed-fastener panels won't go.

- / Taller rib for a stronger panel profile
- / Low 2:12 minimum slope for shallower roofs
- / A commercial and structural favorite

Specifications

Coverage width	36"
Rib height	1.25"
Rib spacing	12" on center
Lengths	Cut to length, 3' to 60', to the 1/8"
Substrates	Galvalume, painted, or print
Minimum slope	2:12

Where it goes

Roofing

Walls and siding

Matching trim

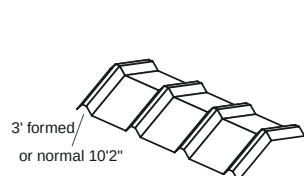

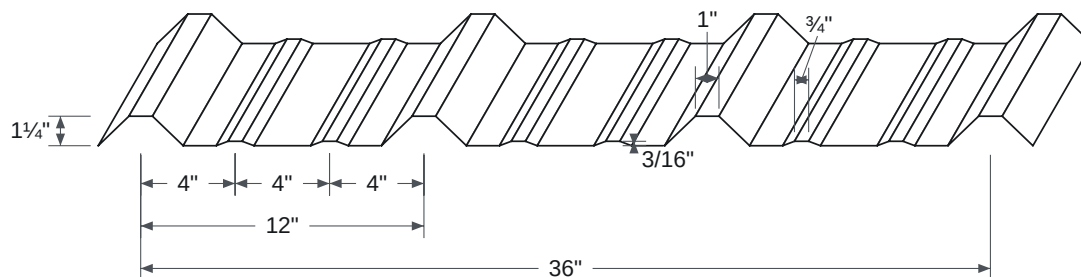

Before you order

Confirm the profile, gauge, color, lengths and fasteners with our team. Trim drawn for R-Panel is on the next page. Every piece is bent to your measurements.

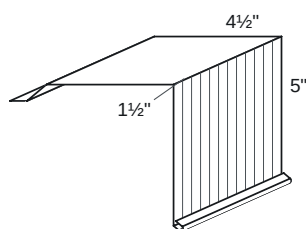

Monday – Friday: 7:00 AM – 5:00 PM. Saturday: By appointment. Sunday: Closed.

Trim for R-Panel

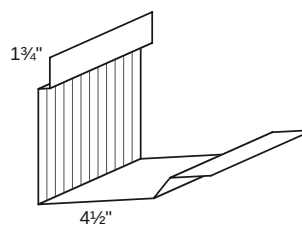

From Ridgeline's Standard R Panel trim sheet, with the sizes we bend most often.

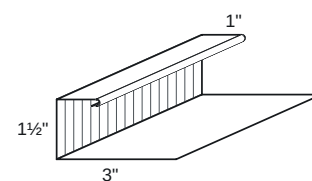

R-Panel ridge cap

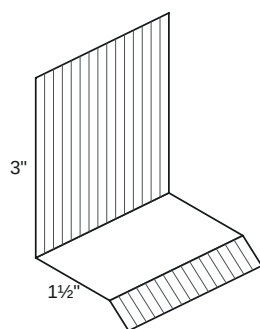

Gable end

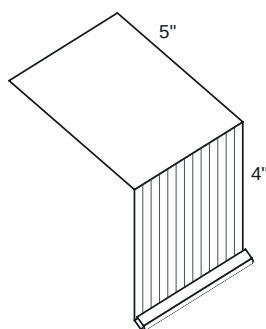

Outside corner

C-casing

Rat guard

Eave trim

Trim is not limited to these drawings and dimensions.

Drawings show the shape and the sizes we bend most often; they are not to scale.

These are samples of some standard trim. We bend many other kinds of flashing.
